

## ASYCUDA FULLY OPERATIONAL IN FIER CUSTOMS OFFICE, ALBANIA

ASYCUDA system was implemented in the Fier Customs Office by the Albanian Project Team, with the support of the UNCTAD in-country Customs and IT Advisers.

The implementation of the system included: installation/configuration of the IT equipment and software, installation / configuration of the ASYCUDA system, training of the Customs staff and of the customs brokers' personnel, testing, parallel operation etc.

The particularity of this implementation is that the ASYCUDA-clients are connected directly to the ASYCUDA central-server in the Customs headquarters, in Tirana, and not to a local server.

All customs declarations are automatically consolidated in the central ASYCUDA-database and the ASYCUDA-clients use the updated reference data (tariff etc) existing in the Customs headquarters.

ASYCUDA is now fully operational in Fier:

- 100% of the declarations are processed through ASYCUDA
- 100% DTI (Direct Trade Input)
- all customs regimes are operational.
